This extension adds support for reusing and moving the Report Items in visual studio by providing a set of useful commands. This is a simple extension and can be brought into visual studio from a clean project and doesn't require you to do a lot of setup. Here are some features of the extension: It lets you create Moving type Commands (Directly from the Toolbox, Add New Item) You can group any number of nodes and move them. This helps in organizing items. Here are some configuration steps you need to do. Open Visual Studio and select the "Tools" menu. Select the "Extensions and Tools" menu item. Select the "Manage Extensions and Updates" option. Re-open your project and then open the "Report Designer Extension" menu item. Select the "Options" option from the menu. A new dialog box will open. You can configure the above properties like: "Report Items Global Options" - This sets the default state of the option. By default, this option is set to "None" and you won't see this option in any menus. You can change the default state. "Select Nodes: None" - This option will select all the report items in a project. This option is enabled by default. "Send to Back: False" - This sets the default state of the option. By default, this option is set to "True" and this will send the selected report item to the back. You can change the default state. "Send to Front: True" - This option will send the selected report item to the front. This option is enabled by default. "Always Move Items: True" - This option will always move the selected report item to the front or to the back. This option is disabled by default. Here is the output after we configured the options: Visual Studio Configuration Settings Here are the configuration properties you need to change if you want to configure them differently: Note: If you already have report items set to be selected and have set "Always Move Items: False", you need to set this value to "True" in order to enable it. Extensions Managed By: The "Extensions Managed By" property corresponds to "Report Items Global Options" in the above configuration section. This is the configuration properties which you need to change to set the
