What's New In?

Maftoox File Tools is a collection of useful utilities that provide all the features that you could ask for. With this utility, you can split your file into several pieces and join it again at any time, encrypt your files with your custom password, or decrypt your files with the password that you have chosen. The utility is also a very convenient tool for deleting files and files batch, and last but not least, you can also create a strong password generator with just a few clicks. Features: File Splitting With Maftoox File Tools you can fragment your files into multiple parts, and the created files will be sent to the designated locations. You can choose the number of parts you need from the tool's settings. File Encryption With this utility, you can encrypt your files with a custom password. The strong password generator can create strong passwords of up to 100 characters, and if you want to, you can have a separate word list file for faster password generation. File Decryption With this utility, you can decrypt the files encrypted with your custom password, and the same goes for encryption. Requirements: On the PC, you will need to have Windows XP, Vista, or Windows 7 with.NET Framework 4. On the MAC, you will need to have Mac OS X 10.7 or later. On Linux, you will need to have Ubuntu or Debian. Installation: -Unpack the downloaded archive. -Move the MaftooxFileTools.exe to the required directory. -Run the application and you will be ready to go. Note: If you want to use the password generator, you have to download and install the Maftoox PasswordGenerator. The password generator can generate very long passwords (up to 100 characters), so it's best to use it only if the number of files or the amount of data you need to protect is very large. FAQ: How do I encrypt/decrypt my files with the Maftoox File Tools utility? The encrypted files can be decrypted using the same utility, you can also use any other program to read encrypted files, for example, Windows Explorer. How many files can I join with the Maftoox File Tools utility? The utility can join a maximum of 10 files at once. If you want to join more than 10 files, you will need to use a 3rd party tool to join the files for you. Why is the word list file required for fast password generation in the password generator? It is required because passwords with many characters will take longer to create. However, if you have a large list of passwords, you will probably be creating many passwords, so the utility will take longer to create your passwords. Versions:
