XOOPS is a complete content management framework that is easy to use, powerful and extendable. It comes with a wide range of ready to use components (modules) that allow you to build your own site quickly.

What is new in this release: XOOPS

Version 3.1.1 • Updated XOOPS Version

3.0.2 • Now compatible with PHP4

(needed by the latest phpBB boards) • Now

compatible with MySQL 3.23.x • Now

compatible with the latest stable of Moodle

and KM Pro • Optimized database

performances • Many compatibility fixes

and cleanups • Added new validators

(Alpha versions only) • Added 'Google

Code' feature • Added some new module

(Ticker, Wikia, StarDiv, Git, Fuddruckers, Theme, Survey, Gallery, Forum, Job Board, Blog, Multiple Authors, WordPress, Groupe) • Added new theme (XOOPS-Blue) • Optimized code, documentation and improve the overall stability • Now using Bluefish for development (FREE!) • Improved code standards with PEAR coding and BDFL (SimpleTest) • Improved support for drag and drop uploads (XOOPS File Upload) • Improved support for PHP 4.0.x (Long-term maintenance). • Improved support for phpBB (3.0.0 and later) • Improved support for Moodle (Moodle 1.x, 2.x, 2.x.1, 2.x.2) • Improved support for KM Pro (KM Pro 1.x, 2.x, 2.x.1, 2.x.2, 2.x.3) • Improved security and added anti-spam

filter • Lots of other minor improvements and cleanups. XOOPS Version 3.0.1 • Improved new admin section • Improvements on the file uploads section • Improved drag and drop functionality • Fixed a problem with the UUID() function • Fixed a small bug with the file size check in the File Manager • Fixed a bug in the download manager • Changed the permission for modules to run from the modules directory to the administrator directory. • Fixed a bug in the file manager on the main index page. • Fixed a minor bug in the image manager • Fixed a bug in the file upload

What's New In?

XOOPS is the industry leading dynamic

web content management system written in PHP. XOOPS is opensource and is free to use. On top of all this, XOOPS is easy to install, easy to use and features a powerful admin panel that lets you create as many websites, modules and users as you want. Why XOOPS? XOOPS is designed to be the first open source, easy to use, dynamic web content management system and the system that so many dynamic websites use. XOOPS is easy to install, easy to use and features a powerful admin panel that lets you create as many websites, modules and users as you want. What's more, it is opensource and is free to use. Installing and Configuring XOOPS: XOOPS is easy to install and configure. Step 1 - Installing Install XOOPS using the XOOPS Installer,

available on the XOOPS download page. XOOPS includes a detailed online documentation, which you can access by clicking on the Documentation button on the XOOPS install screen. Step 2 - Configuring XOOPS is also easy to configure. After installing XOOPS, run the XOOPS Configuration Wizard. Click on File | Open Wizard. In the Wizard, select File for Operation Type and File Path, select Manual | Enter Site Directory, click Finish. Now, when you run XOOPS from this directory, the Wizard will show you all the options that you can configure XOOPS to. See the Configuring XOOPS documentation for more information on the Wizard. Step 3 - Modules XOOPS allows you to install modules. A module is

like a mini version of XOOPS. It can be used for extra functions such as: Content (Articles, pictures, etc.) Users and groups (user profiles, membership, etc.) Popular Pages Users (membership, forums, posts, etc.) Search (SEO) Email (news, etc.) Weblogs (blogs, etc.)

Step 4 - Caching
XOOPS includes a built-in caching system, which means that it speeds up the loading of your website.

Step 5 - Admin Panel
XOOPS includes a powerful admin panel that can be accessed through the root directory of your site, or by clicking on the XOOPS icon on your Web server.

Step 6 - Widgets
XOOPS supports widgets. You can display any text, image, etc. on your Web pages by including the widget in your pages.

Step 7 - Documentation
XOOPS

includes documentation. See the Documentation link on the XOOPS download page for more information. The XOOPS Community: XOOPS is opensource and free to use, which means

System Requirements For XOOPS:
