Version 4.1.0 adds support for SSL/TLS connections. Version 4.0.0 adds support for incoming server-side connection management. You can now use multiple instances of Dream FTP Server on the same server for load balancing. Version 3.1.4 adds support for non-Unix operating systems, web directories, and log management. Version 3.0.1 adds support for Fast File Transfer (FXP), a new way to transfer files. Version 2.2.0 adds support for IP address access control. Version 2.0.2 adds support for third-party servers. Version 2.0.1 adds FTP site aliases. Version 1.7.2 adds support for wildcard directories. Version 1.7.1 adds support for SPN (Service Principal Name). Version 1.7.0 adds support for simultaneous transfers on a single port. Version 1.6.2 adds support for site-specific account databases. Version 1.6.1 adds support for multiple local account databases. Version 1.6.0 adds support for multiple IP addresses on a single computer. Version 1.5.4 adds support for external log databases and remote (read-only) users. Version 1.5.3 adds support for passive mode. Version 1.5.2 adds support for upper-case file names. Version 1.5.1 adds support for secure transfer authentication. Version 1.5.0 adds support for secure transfer authentication with Netscape. Version 1.4.3 adds support for Kerberos 5.5 and Winsock 2. Version 1.4.2 adds support for short file names. Version 1.4.1 adds support for existing log database schema. Version 1.4.0 adds support for separate active and passive log files. Version 1.3.2 adds support for Simple Service Provisioning Protocol (SSCP) users. Version

Dream FTP Server Crack +

This file contains the keyboard macro settings of Dream FTP Server Crack, and the default settings for all machines can be found in the Cracked Dream FTP Server With Keygen: Settings dialog box. To change a keyboard macro for a specific machine, you need to know the computer name. Keyboard Macro Definition: Most of the functions in Dream FTP Server are performed by means of keyboard shortcuts. For example, the keyboard shortcuts for uploading and downloading files are Ctrl + Up Arrow and Ctrl + Down Arrow. To change the keyboard macro for a specific function, double-click the desired keyboard macro or click the [?] button at the top of the screen to open the Keyboard Macro Definitions dialog box. The keyboard macro definitions are listed in order of appearance, and you can select the desired macro by clicking its [+] button. Dream FTP Server: Settings dialog box: The Settings dialog box is the main window for Dream FTP Server, and it contains all of the settings for the FTP server. It also lists all available devices (servers, workstations, printers, etc.) connected to the machine. 1. Device Settings: The Device Settings dialog box is used to set or change the settings for the connected devices and printers. 2. Users Settings: The Users Settings dialog box is used to configure the users and group names. 3. Log Management Settings: The Log Management Settings dialog box is used to configure the Dream FTP Server log manager. This is used to create, edit, and delete log files, as well as to view and manage the log file. 4. Server Properties: The Server Properties dialog box is used to set the server and user details. 5. FTP Server General Settings: The FTP Server General Settings dialog box is used to set the FTP server settings, such as the server name, server port, and authentication settings. 6. Connections: The Connections dialog box is used to manage the server connections, and to view and configure any currently open connections. Operating System: Dream FTP Server is tested with Windows XP, Windows 2000, Windows Server 2003, and Windows 7 Home Premium. Prerequisites: Dream FTP Server requires Microsoft Visual Studio 2003 or later, and the Visual Studio Version that Dream FTP Server was built with. It also requires the .NET Framework 3.5 or later, and the Dream FTP Server will install the .NET Framework 3.5 or later automatically. Note: You do not need 2edc1e01e8

Dream FTP Server Crack Latest

Dream FTP Server is a free, open-source, multi-threaded, FTP server for Windows. It has a friendly interface, light-weight installation package and a powerful set of FTP settings. It is highly configurable and you can easily add new virtual directory to your FTP. Dream FTP Server is easy to use. Its interface is very simple and intuitive. You can easily add, change and remove virtual directories with a friendly user interface. Each virtual directory can be assigned a separate user group and a separate password. You can also assign a new password for each user, set various access and authorization options, create a new user group, and so on. You can add new directories using the "Add Virtual Directory" button on the virtual directory screen. You can set the following FTP settings for the virtual directory: ⬤ Connection timeout - the time, in seconds, after which the connection is automatically aborted ⬤ Number of concurrent sessions - the number of concurrent FTP sessions allowed to be opened from the same IP address ⬤ Bypass FTP server - whether to bypass the FTP server to FTP client, or vice versa, in case of connection problems ⬤ Virtual directory user group - the user groups, other than the default one, that should be allowed to access the virtual directory ⬤ Virtual directory permission level - the permissions to be assigned to the virtual directory ⬤ Virtual directory password - the password to be assigned to the virtual directory You can assign new user groups, set their permissions, create a new user group and so on. Virtual directories can be created for email accounts, SSL certificates and even custom domains. You can easily remove a virtual directory and its files from the server using the "Remove Virtual Directory" button on the virtual directory screen. You can also change any of the settings for a virtual directory. With Dream FTP Server, you can easily connect to the server via the "Connect to FTP" button on the main screen. You can access the server from the same computer or from another computer in the local network. The first connection is disabled by default and you can enable it by the "Enable first connection" button. You can easily manage your server by the "List Servers" button on the main screen. You can delete a server or modify its settings using the "Edit Server" button. If you are the first administrator of the server, you can change its hostname, IP address, and so on. You can also modify the server's P
